Features

- ✓ Significant life cycle cost advantage
- ✓ Extends the operational theater and enhances mission effectiveness of the aircraft
- ✓ Improves safety
- ✓ Provides breathing oxygen in presence of chemical agents
- ✓ Weighs less than LOX
- ✓ Eliminates LOX quantity management workload in flight
- ✓ Reduces logistics infrastructure and turn-around time
- ✓ Eliminates the need for LOX generation, servicing and storage
- ✓ Eliminates Daily / Turn-around inspections
- ✓ Eliminates "I" level support

OBOGS eliminates the need for LOX by utilizing bleed air from the engine and separating its components through a two-bed molecular sieve pressure swing adsorption (PSA) technology.
